Specification	
Model	SR5-BPR
Frequency(MHz)	CE, FCC : 433.1500 / 434.6500 KC : 447.8750 / 447.9750
Freq Stability	±5 ppm
Data Rate	1800 bps
Channel space	12.5 KHz
Modulation	FSK (±3KHz)
Output Power	10mW (Max)
Sensitivity	-118dBm (at 12dB)
Power Supply	DC 12V/1A Adapter
Dimension(mm)	146W × 90L × 32H
Battery Life cycle	External Power
Antenna	Tilt base snap-in_dipole (External)

! Warning This is for the case with the possibility of serious injury or death if this is not observed.

! Caution This is for the case with the possibility of minor injury or damage to the product if this is not observed.

Power precautions

! Warning
Be sure to insert the power plug to the end of the inner part. [If the connection is unstable, it may cause fire.]

! Caution
Be sure to unplug the power plug while holding it firmly. If cord is unplugged by pulling out, some parts of the cord can be disconnected and it may cause risky situation. [It may cause fire.]

! Caution
Do not touch the power plug with wet hand. [There is a risk of electric shock.]

! Warning
Do not use one socket for multiple devices at the same time. [It may cause fire due to overheating of the socket.]

! Caution
If power plug is dropped or case is broken, unplug the power cord. [If it is used as it is, it may cause fire or electric shock. Please contact service center.]

! Caution
In case of thunderstorm or lighting or if the power plug is not used for long time, unplug the power cord. [There is the risk of electric shock or fire.]

Use precautions

! Caution
not press or scrape the screen surface strongly with hand or sharp object (nail, pencil, pen, etc.) [The screen surface can be damaged or it can cause failure.]

! Caution
Do not spray inside or outside of the product with water or clean it with benzene or thinner. [This can lead to poor insulation of the electric device and cause electric shock or fire.]

! Caution
If inside of the product is exposed to water or foreign substance, contact service center. [There is the risk of fire or electric shock due to the damage to internal components.]

! Warning
Do not separate, repair or remodel the product by user own decision. In case repair is needed, contact service center. [It may cause fire or electric shock.]

! Caution
Do not install the product at humid, dusty or watery place. [It may cause an electric shock or fire.]

! Caution
If possible, avoid installing the product at the place near to metal sheet, wire or LED light. [Distance between transmission and reception can be shortened depending on surrounding environment.]

Adapter is one of expendable supplies.

When necessary, please purchase an adapter with DC12V 1A

Components

Type of set mode

User can set following modes with user set button.

E1 FrEq	Frequency setting The function to set the frequency of the repeater.
E2 rEgT	Call bell ID registration The function to register the ID of the call bell to be relayed.
E3 dUPT	Setting of the time for prevention of duplicate reception (Default setting is 3 seconds) The function to restrict reception for call from the same call bell.
E4 TXdT	Transmission delay time setting (TX Delay Time) The function to set the delay time of the transmission after receiving call.
E5 dELE	Individual deletion of the call bell ID The function to delete registered call bell individually.
E6 NOrX	[No Receive] bell ID setting The function to set the call bell which user does not want to receive among the registered call bells.

Frequency setting

· The function to set frequency of the repeater.

(1) Press the MENU button and enter the setting mode.

· [E1 FrEq] is displayed on the screen.

(2) Press the SET button at [E1].

· The frequency regulated by certification body is displayed.

(3) Select the frequency with up/down button (▲ ▼).

· The set default frequencies are different as per the certified model as follow;

※ default frequencies :

CE model	4346500
FCC model	4346500
KC model	4479750

(4) Press SET button, then set value is saved.

· [E1 FrEq] is displayed on the screen.

(5) Press MENU button, then it turns to standby for reception status.

· [-----] is displayed on the screen.

Call bell ID registration

· The function to register the ID of the call to be relayed.

(1) Press the MENU button and enter the setting mode.

· [E1 FrEq] is displayed on the screen.

(2) Select [E2] mode with Upward (▲) button and press SET button, and then "1" flashes.

· [E2 rEgT] is displayed on the screen, and then "1" flashes.

(3) Set the number (bell ID) you want with Up/Down, Left/Right (▲▼◀▶) and MENU button.

Left / right (◀▶) button Move digit number

Press MENU button for three seconds
Number and alphabet conversion

Number / Alphabet that can be expressed

Number	0123456789 ^(Bark)
Alphabet	A b C d E F G H I J K L M N O P Q R S T U V W X Y Z - _ ^(Bark)

(4) When call bell button to be registered is pressed, set number is registered with a "beep" sound and number is automatically increased to the number next to the registered number and it is displayed on the screen.

(Ex: When "1" is registered, and then number on the screen is automatically increased to '2'.
When 'A' is registered, it is automatically increased to 'b' on the screen.)

· In order to register a bell as automatically increased number repeat process (4) and for registration for other numbers repeat process (3) and (4).

(5) After completion of the registration, press the SET button.

(6) Press MENU button, then it turns to standby for reception status.

· [E2 rEgT] is displayed, and then [-----] is displayed.

Setting of the time for prevention of duplicate reception

- The function to restrict reception of the same call bell during set time.

(1) Press the MENU button and enter the setting mode.

• [E1 FrEq] is displayed on the screen.

(2) Browse [E3] mode with UP (▲) button and press SET button.

• [E3 dUPT] is displayed on the screen.

Default setting is 5 seconds and [005] is displayed on the screen.

(3) Set the desired set value with up/down button (▲▼).

• Set number is displayed on the screen.

(4) Press SET button, and then set value is saved.

• [E3 dUPT] is displayed on the screen.

(5) Press MENU button, then it turns to standby for reception status.

• [-----] is displayed on the screen.

Transmission delay time setting

- The function to set delay time for transmitting after receiving call bell.

(1) Press the MENU button and enter the setting mode.

• [E1 FrEq] is displayed on the screen.

(2) Browse [E4] mode with UP (▲) buttons, and then press SET button.

• [E4 TXdT] is displayed on the screen.

Default set value is 2 seconds and [020] is displayed on the screen.

(3) Set desired set value with up/down button (▲▼).

• Set number is displayed on the screen.

(4) Press SET button, and then set value is saved.

• [E4 TXdT] is displayed on the screen.

(5) Press MENU button, then it turns to standby for reception status.

• [-----] is displayed on the screen.

Individual deletion of the call bell ID

· The function to delete registered call bell individually.

(1) Press the MENU button and enter the setting mode.

· [E1 FrEq] is displayed on the screen.

(2) Browse [E5] mode with up (▲) button and press SET button, then the call bell ID registered at the first is displayed.

· After [E5 dELE] is displayed on the screen, then the call bell ID registered at the first is displayed on the screen.

(3) Select the call bell ID to be deleted with Up/Down (▲▼) button.

· The call bell ID selected is displayed on the screen.

(4) When the right (►) button is pressed, then selected ID is deleted and a beep sound output is made.

· To delete another call bell ID, (3) and (4) process is needed to be repeated.

(5) When MENU button is pressed after pressing SET button, it turns to standby for reception status.

· [E5 dELE] is displayed, and then [-----] is displayed.

[No Receive] bell ID setting

· The function to set call bell which user does not want to receive among the registered call bells.

(1) Press the MENU button and enter the setting mode.

· [E1 FrEq] is displayed on the screen.

(2) Browse [E6] mode with UP (▲) button and press SET button, then the call bell ID registered at the first is displayed.

· After [E6 NORX] is displayed on the screen, then the call bell ID registered at the first is displayed on the screen.

(3) Select the call bell ID not to be received with Up/Down (▲▼) button.

· The call bell ID selected is displayed on the screen.

(4) Set "to be received/ not to be received" with the right direction (►) button.

· Whenever right direction (►) button is pressed, (No Receive) icon is on and off in turn and the ID set by the icon is not received.

(5) When MENU button is pressed after pressing SET button, it turns to standby for reception status.

· [E6 NORX] is displayed, and then [-----] is displayed.

Installation guide and notice for attention

For smooth use of the product, be sure to install the product carefully together with attention for followings.

Determining the location for installation

※ Install in the place with 100% reception rate.

As shown in the picture, it is most reliable to install the product on the location A and in case of location B, even though it is located within the range of reception rate, it is unstable location because it is close to border line.

Fixing the cradle (Be sure to fix the cradle when the location for installation is determined.)
Placing the repeater on the fixed cradle (Fix it until you hear click sound.)

It is the best case when product is fixed on the ceiling as shown in the picture above and antenna points downward, and in case this is not possible, installs the product close to ceiling as much as possible.

Connecting power supply (Be sure to use the adapter provided with the product.)

※ Humidity or flooding is the cause of malfunctioning for this product, therefore, be sure to install the product on the place water cannot reach.
If product should be installed outside of the building, be sure to install it under the eaves or on the place where rain cannot reach.
